Leslie Nii-Adjetey

Accra, Ghana | +233 552518992 | leslieniiadjetey@proton.me | https://gh.linkedin.com/in/leslie-nii-adjetey-2a7552212 GitHub: https://github.com/Leslie1302

SUMMARY OF QUALIFICATIONS

- Experienced and accomplished professional with a track record of two years in the engineering and project management industries, consistently delivering impactful results.
- Well versed in identifying common risks, threats, and vulnerabilities, as well as techniques to mitigate them
- Proficient in protecting networks, devices, people, and data from unauthorized access and cyberattacks using Security Information and Event Management (SIEM) tools.
- Self-assured in excelling within dynamic environments, utilizing expertise in Linux, Python, Bash, and MySQL to contribute to team accomplishments.
- Committed to lifelong learning and going the extra mile to contribute to facilitate continuous improvement.

SKILLS

• Microsoft Azure	Log analysis	Github	ssh
• Python	HTML	GIT	Pentesting
• Bash	CSS	Risk Mitigation	Metasploit
• MySQL	Netcat	Linux	Nmap

RELEVANT PROJECTS

Packet Sniffer (Network Protocol Analyzer):

- Developed a robust Packet Sniffer that operates at a granular level, capturing and dissecting network protocols with meticulous precision.
- Implemented advanced features to facilitate in-depth packet inspection, offering a comprehensive understanding of data transmission patterns and network behavior.
- Employed custom filters and analysis modules, enabling the identification of anomalies and potential security threats within the network traffic.

- Integrated real-time visualization tools for packet analysis, providing an intuitive interface for users to interpret complex data flows effectively.

- Contributed significantly to enhanced network security and performance optimization by identifying and addressing inefficiencies in data transmission.

Antivirus:

- **File System Monitoring:** Scans specified directories (default: user's Documents folder) for new files, checking each file against a malware hash database using TLSH.

- **Process Monitoring:** Tracks running processes, flagging those with excessive CPU usage (>80%) as potentially suspicious.

- **Registry Monitoring:** Checks Windows registry entries under Software\Microsoft\Windows\CurrentVersion\Run for known malicious keys (Windows-specific due to winreg).

- **Quarantine System:** Moves detected malicious files to a quarantine directory and logs details in SQLite, including file information and malware signatures.

- **GUI Alerts:** Provides real-time alerts via a Tkinter-based interface, displaying threat detection status and quarantined files.

- **Logging:** Maintains detailed logs in antivirus.log for debugging, tracking, and system insight.

- **Real-Time Monitoring:** Continuously monitors files, processes, and registry entries, with alerts sent to the GUI upon detection.

Self-set up SIEM tool via Microsoft Azure:

- Configured a comprehensive Self-Hosted Security Information and Event Management (SIEM) tool leveraging the capabilities of Microsoft Azure.

- Established a centralized platform for monitoring and analyzing security events across the organization's infrastructure.

- Implemented robust log aggregation mechanisms, collecting data from diverse sources to provide a holistic view of security incidents.

- Integrated threat intelligence feeds and correlation rules to identify patterns indicative of potential security breaches.

- Customized alerting and reporting functionalities, enabling proactive responses to security events and bolstering the organization's overall cybersecurity posture.

Password Strength Checker with GUI:

- Developed a robust Password Strength Checker application featuring an intuitive Graphical User Interface (GUI) to provide users with immediate and actionable feedback on password quality.

- Designed the GUI to simplify user interactions, allowing for straightforward password input and clear display of strength evaluations.

- Implemented a comprehensive password evaluation engine that assesses strength based on multiple factors, including length and character diversity, with specific thresholds for length (8+, 12+, 17+, 20+ characters) and inclusion of uppercase, lowercase, digits, and special characters.

- Integrated a scoring system that rates password strength on a scale of 1 to 7, accompanied by descriptive feedback to guide users in improving their passwords.

- Utilized Python and Tkinter to develop the application, ensuring a responsive and userfriendly interface.

- Developed a custom scoring algorithm to accurately measure password strength and provide meaningful evaluations.

- Ensured clear and effective presentation of results, allowing users to quickly understand their password's strength and make necessary adjustments.

- Conducted user testing and feedback sessions to refine the interface and functionality, enhancing usability and ensuring reliable performance.

- Demonstrated significant improvements in user password practices by providing immediate insights into password security, thus promoting stronger password choices.

WORK EXPERIENCE

Assistant Electrical Engineer, Ministry of Energy, Ghana (energymin.gov.gh) **Jan 2023 – Jul 2024**

- Manage the nationwide Self Help Electrification Project (SHEP), ensuring the integrity and availability of all project-related data.
- Develop, implement, and maintain the MoEn Inventory Management System (IMS), a web application central to SHEP operations.
- Designed and implemented a comprehensive security framework to safeguard the Ministry's Inventory Management System (IMS) website from cyber threats Conduct regular audits of login logs, promptly identifying and blocking threat actors' IPs to fortify system security.
- Championed security awareness initiatives by delivering training sessions and fostering a culture of cybersecurity best practices among staff
- Utilize APIs to extract and manage data from user forms within the IMS. Conducted data cleansing through queries in our database for visualization on dashboards within the IMS.

EDUCATION Kwame Nkrumah University of Science and Technology | Kumasi, Ghana
Sep 2017 – Nov 2021

BSC. Electrical Engineering, *Second Class Honours*

Key Modules: C Programming, Microprocessors, Computer Networking

Coursera | E-Learning Platform (Google Cybersecurity)
Oct 2023 – Feb 2024
Google Cybersecurity Training Program: Mastering Cybersecurity on Google Cloud Platform
Key Modules: Google Cloud Security Fundamentals, Identity and Access Management (IAM), Security and
Compliance on Google Cloud Platform, Network Security on Google Cloud, Data Protection and Encryption,
Incident Response and Forensics, Container Security, Security Automation and DevSecOps, Google Cloud Security Best Practices, Practical Labs and Case Studies

CERTIFICATIONS AND BADGES

Google Cybersecurity **Feb 2024**
